

Universal Harmonic Theory – Volume I

Definitive First Edition

Editorial Blueprint and Master Manuscript Framework

Purpose

This blueprint defines the editorial architecture for the evolving master manuscript. It is intended to guide the development of a coherent research monograph while clearly distinguishing established scientific background from the author's original theoretical proposals.

Editorial Principles

Maintain one evolving master manuscript rather than multiple competing drafts.

Integrate new concepts into the most appropriate chapter instead of appending them.

Use one consistent terminology, notation system and editorial voice.

Identify conceptual proposals as hypotheses requiring mathematical development and empirical investigation.

Maintain publication, scientific and ethical disclosures in every major edition.

Proposed Book Structure

Master Manuscript Roadmap

v1.0: Integrated foundations, disclosures and initial chapter structure.

v1.5: Expanded Chapters 7–10 with unified notation.

v2.0: Integrated Chapters 11–15 with full synthesis and appendices.

v3.0: Publication-ready first edition after comprehensive editorial revision.

Editorial Goal

Develop a publication-quality research monograph with consistent organisation, clear definitions, transparent distinction between accepted scientific background and original hypotheses, and a revision history documenting the evolution of the work.
